

SLIGRO-ISPC BELGIUM WINS SUSTAINABILITY AWARD (THANKS TO BOTEMP)

And the winner is... Sligro-ISPC Belgium!

One of our customers, Sligro-ISPC Belgium, was recently awarded a wonderful sustainability award. During the Horeca Expo, one of the largest Belgian food and beverage trade fairs, our client won the *Innovation Award* in the category 'sustainability' because of their choice for TRENDS-Logic electric vehicles.

That also made us very proud. Perhaps you are wondering why?

TRENDS-Logic's 100% electric commercial vehicles run on solar energy. They have been developed in response to the growing demand for clean and silent transport in inner cities. TRENDS-Logic was desperately looking for a sustainable refrigeration system that does not use the vehicle's electric battery for charging, as that considerably shortens the vehicle's range.

Therefore, it seemed only logical that TRENDS-Logic chose the *Cold Pod* from BoTemp, because this Cold Battery is charged beforehand using the electricity network. The fans and sensors in this refrigeration system ensure that the temperature in the cargo area remains constant, even when there are many stops and door openings. It allows you to refrigerate as efficiently and sustainably as possible.

Sligro-ISPC Belgium is making good progress in terms of sustainability. At the beginning of 2020, the Cold Pod will also be installed in two of their trucks. Besides Sligro-ISPC Belgium, also our client Huuskes has opted for the Cold Pod. At the end of this year, two of their trucks will be driving around with our rechargeable Cold Battery.

Would you like to know more about our cold batteries? [Read more about the applications and specifications here.](#)
